

Trailblazing
breakthroughs
in neuroscience,
so more you
shines through.

We elevate life
through science,
so a brighter
future shines
through.

For our mothers and fathers. For our daughters and sons. For our grandparents, friends and neighbors. For the millions of people impacted by neurological disorders and fighting for their future every day. We are Acadia — a family of 600+ caring and courageous warriors, fiercely committed to our mission of elevating life through science to enable brighter moments for patients and their loved ones.

For more than 25 years, we have been working at the forefront of healthcare to protect what makes you, uniquely you. We believe that by collaborating with each other, inviting new ideas within and beyond our walls, we can bring vital new therapies and solutions where they're needed most. And we'll never stop fighting.

Our values unite us.

We fight for patients...
to elevate life through
science

We are driven by
innovation...to forge a
healthy future

We are family...united
through collaboration and
diverse perspectives

We are determined...we
break through barriers...
we persevere

We take our work
seriously...but not
ourselves

“Many of us at Acadia have first-hand
experience with loved ones impacted
by the challenges of the diseases we
aim to treat. We are connected by a
shared passion to break through these
challenges and fight for the lives of the
people we serve.” STEVE DAVIS, CEO

We never give up,
so more breakthroughs
shine through.

Neurological disorders are devastating for everyone affected by them, and the lack of options only adds to the emotional toll patients and caregivers experience. The gap between what's available and what's needed leaves everyone – patients, caregivers and healthcare providers – feeling frustrated and unsupported by the healthcare system overall.

At Acadia, we refuse to allow patients to suffer needlessly without effective treatments. We'll never stop blazing new trails until the unmet needs of patients, caregivers and providers are filled.

For over 25 years, Acadia has been trailblazing breakthroughs for people with neurological conditions. The Acadia family continues to fulfill the promise of science to deliver vital solutions to people who need them most to help enable brighter moments to shine through for patients and their loved ones.

Today, our late-stage development efforts are focused on central nervous system disorders and Rett syndrome. In early-stage clinical research, we are exploring novel approaches to pain management, cognition and neuropsychiatric symptoms in central nervous system disorders.

In collaboration with Vanderbilt University, we are currently developing a novel approach for improving cognitive function and other neuropsychiatric symptoms in patients with CNS disorders.

Through our acquisition of CerSci Therapeutics, we've added a portfolio of novel compounds for neurological conditions, including non-opioid therapies for acute and chronic pain.

We partner
beyond the science,
so more possibilities
shine through.

Behind every disease is a person – a human in need of compassion and empathy as much as treatment. We're dedicated to helping the diverse communities living with central nervous system conditions and providing education and support beyond science where we can. By partnering with leading organizations to advance the understanding and care across neurology, psychiatry, long-term care, rare disease, pain, and mental health, we're shining new light and bringing new understanding to these disease areas than ever before.

**Collaborating to understand more,
so we can all care more.**

We're dedicated to partnering with organizations advancing the education of healthcare providers on the frontlines of caring for people living with central nervous system conditions. These collaborations include leading Neurology and Movement Disorder, Psychiatry, Dementia, and Long-Term Care medical societies. We also partner with leading academic medical institutions to advance research and support development of new therapies.

A therapeutic focus that spans a lifetime.

We are actively supporting clinical studies that span "pediatric to geriatric" neurology. Our experience in Parkinson's disease led us into the fields of other CNS disorders and Rett syndrome for which no approved therapies currently exist. We'll never stop fighting to find answers for these unmet needs — and those in mental health, pain, and psychiatry, until everyone can live their brightest life.

Building a healthier patient community.

Inspired by the determination of the diverse patient caregiving community, we're proud to support national patient advocacy groups and sponsor the development of new educational resources — both live and virtual — needed to raise awareness of the disease challenges their patient communities face. Combined with the volunteer and philanthropic contributions of our 600+ caring employees, we believe these efforts will help optimize care for patients everywhere, so everyone can shine through.

We see promise in areas where
so many have failed or would
never even consider. We believe in
our science, even when things get hard.
Because we're all human. And we're
all meant to shine through.
